

3D HOLOGRAM LED FAN

Holographic device that will make you believe in magic

In today's fast changing world, technology is making huge strides and advancements each and every day. Taking pride in being trendsetters, we don't intend to be left behind and we are always inventing so as to remain at the top. We are Lazer Light LED's, an LED product supplying company located in Hyderabad, India. Here, we understand that one of the most crucial aspects of any business is advertising. Therefore, we always try to come up with new technology that can give a boost to businesses in regards to advertising their products and services.

How it works

Holographic fans are the latest and most modern devices used in the display of products. They work by displaying a hologram LED image in the mid air. The visuals are normally very appealing, something that entices a customer to consider purchasing the displayed product. Since people are always fascinated by something new and exciting, they will definitely want to experience it.

Product specifications

Our holographic fans come in all shapes and sizes depending on the image that needs to be displayed. Larger fans display bigger images and vice versa. They also have certain specifications that allow them to work well and optimally. For example, they have a resolution of 1024 by 1024, which means that the resulting projected image is of very high clarity. In terms of power usage, it's very economical since the device uses only 18 volts. That means that even if the fan remains on throughout, the power bill won't change much, therefore it is very economical.

Compatibility

The holographic fan is also compatible with numerous picture and video formats such as JPEG, MP4, AVI, GIF and APEG. This ensures that no matter the format of the image or motion video, the device is capable of displaying the content.

Prices

Despite being quite a new concept in the market, we have subsidized our prices on our holographic fans. We understand that if the prices are too high, then the product will be unattainable to most people. Our business is to make sure that yours thrives and so you can get one of them for your business premises. If this won't bring in more customers to your business facility, I don't know what will.
