

# INTERACTIVE PROJECTORS

## **Next Gen projectors that will give your presentations and viewing a new touch**

Are you looking for a projector that can make your presentation work easier? Look no further, we've got you covered. Lazer Light LED's specialized in importing quality of LED products, among them being Interactive and Touch projectors. This is simply a projector that allows the user to either interact with the projected image, the projector itself or another device. The presenter is able to interact with the projected image by use of an electric or mechanical stylus or even a finger. Our wide range of interactive and touch projectors also allows user generated information to be captured, replayed, printed and copied even without the projected image.

### **Staff and warranty**

Our highly qualified engineers are always making sure that the projectors that they manufacture are of the best and highest quality which makes them durable and long-lasting. Because we understand that sometimes, things may go wrong and the device malfunctions, we offer a one year warranty to our projectors, which means that during that time, the device can be repaired free of charge by our qualified team.

### **Quality and prices**

Here at Lazer Light LED's, we understand the importance of high quality products and good pricing. A compromise on either of the two is likely to cause low sales. That is why not only are our projectors of the best possible quality, but their price tag is also pocket-friendly

### **Availability**

Our large network of logistics ensures that our projectors are distributed all over the globe. As a result, it is possible to purchase our products from wherever you are in the world. Our main distributors and retailers are major computer and electronic stores and also huge chains of supermarkets.

### **Compatibility**

Our wide range of projectors is compatible with all electronic devices that can be connected to it. They are laptops, desktops and even some tablets. The software installed in our projectors ensures that you can be able to use them with any device that you may have. We do so to make sure that our products neither inhibit nor limit the number of people that can use them. Our number one priority is making certain that all of our customers are satisfied with our services and products.
